The invention relates to nucleic acids and proteins (ADN38683-ADN40064)

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a determining the presence or absence of a pathological cell in a determining the presence or absence of a pathological cell in a continuous control or angiogenic or absence of a pathological cell in a determining the presence or absence of a pathological cell in those of the invention or by detecting a polypeptide of the invention; antibodies which specifically bind a nucleic acid of the invention; use of such antibodies for drug targeting; colypeptides and nucleic acids. The nucleic acids, polypeptides, and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, attentionated and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, retinal neovascularistation syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                   Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting

                                                                                                                                                                                                                                                                                                                                                                                             whose expression is upregnlated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention, antibodies which specifically bind a polypeptide of the invention, antibodies with specifically bind and methods of screening for modulators of activity or expression of the polypeptides and mucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for disgnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            THE SHEET SH
                                                                                                                                                                                                                                                                                              The invention relates to human and mouse G protein-coupled receptors

(GPCRs) and nucleic acids encoding them. The invention also relates to
sequences at least 9% identical to the GPCR proteins and nucleic acids
of the invention, methods of treating, preventing or diagnosing diseases
of the invention, methods of treating, preventing or diagnosing diseases
compounds useful in the treatment of GPCR-related diseases; a transgenic
mouse comprising a GPCR gene of the invention; a mouse comprising
compounds useful in the treatment of GPCR-related diseases; a transgenic
mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
from the trasngenic mice; kits comprising several mice, each of which has
a mutation in a different GPCR gene of the invention; and kits comprising
probes which hybridise to GPCR polynucleotides of the invention. The
cinvention further discloses variants of the GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
diseases including neurological disorders (e.g., Alzheimer's disease,
disporders of the adrenal gland; disorders of the colon or intettine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (e.g., Crohn's disease, diarrachea, food poisoning or irritable bowel syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., antoimmune disorders (e.g., autoimmune disorders or anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or arthritis, bone and joint disorders (e.g., osteoarthritis, rheumarcid arthritis, pout or osteoporosis); metabolic or nutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, bresst, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR of the thyroid (e.g., cancers). The present sequence represents a GPCR of the of the printed specification; those sequences not shown were obtained in ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300

```
The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGFR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGFR modulator. The method comprises: (a) measuring, in the mammal, the level of at least one biomarker identified in the specification; (b) exposing the mammal to the EGFR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond therapeutically to the method of treating cancer. The method and biomarkers are useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGFR) modulator. This sequence corresponds to one of the biomarkers whose levels of expression is measured in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

known as HG38. The HG38 protein and corresponding nucleic acid, may be used in the method of the invention for detecting colon or lung cancer. The first method involves performing an assay to determine the amount of Protein to standard, thus detecting expression of protein in sample.

HG38 in a sample of colon or lung tissue, and comparing the amount of protein to standard, thus detecting expression of protein in sample, where differential expression of protein in sample, where differential expression of protein in sample, where differential expression of protein in sample when compared with the standard is diagnostic of colon or lung cancer. The second method involves hybridizing a composition comprising the HG38 coding sequence, or its complement, and a labelling moiety, to nucleic acids of a sample of comparing complex, detecting hybridization complex formation to a standard, where the comparison reflects differential expression of the polynucleotide in the sample relative to the standard and is diagnostic of a colon or lung cancer. This first method enables earlier diagnosis before the patient is symptomatic. Anti-HG38 antibodies are useful for treating colon or lung cancer.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-1- TISSUB SPECIFICITY: Expressed in the gonads, the adrenal gland, and in the brain. In the central nervous system expression is restricted to the olfactory bulb. In the adrenal gland detected only in the neural-crest derived chromomaffin cells of the medulat, but not in the cells of the adrenal cortex. In the gonads, the expression is high in Graafian follicle, but absent from primary and secondary follicles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Biochem. G-protein coupled receptor; Glycoprotein; Leucine-rich repeat; Repeat;
                                                                                                                                                                                                                                                                                                                                      Nat. Genet. 36:40-45(2004).
-!- FUNCTION: Orphan receptor.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
-!- SIMILARITY: Contains 11 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytoplasmic (Potential).

Biophys. Res. Commun. 282:757-764(2001).

-I- FUNCTION: Orphan receptor.

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- SUBCELLULAR LOCATION: Expressed in multiple steroidogenic tissues:

-I ISSUE SPECIFICITY: Expressed in multiple steroidogenic tissues:

placente, ovary, testis and adrenal. Expressed also in spinal
cord, thyroid, stomach, trachea, heart, pancreas, kidney, prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Potential.
Leucine-rich repeat-containing G protein-
coupled receptor 4.
